

Real Time Event Notifications

Real Time Event Notifications (RTEN) use forensics and specially created algorithms to measure suspicious users accessing courses through BioSig-ID™. When a user triggers certain conditions, institutions receive an email or SMS notification alert in real time.

BIOMETRIC SIGNATURE ID™
* IDENTITY PROOFING SOLUTIONS

This is an automated e-mail triggered by the following user:

Account: Colorado Community College System MLP
LMS: Desire2Learn

Risk assessment:

You are receiving this email because your address is configured to receive automated messages.

If you have questions/problems contact your service provider directly.

BioSig-ID™ protects your virtual Identity!

Lewisville, TX 75057-3318

Sample Results: In one school 78 students out of 2900 were identified with activities typical of academic dishonesty. 58 students were warned, 11 dropped and 7 were failed. No student protested. 1000's of students have been identified as potential cheaters using RTEN's.

Example: Using BioSig-ID, John logs in from an IP and ISP from CA for his class using his mouse at 11 pm. He verifies his ID in 7 seconds. Tomorrow John logs in from Washington D.C. at 9 am using a different IP and ISP, then asks for a password reset and uses a touchscreen in a different course. This activity triggers an RTEN - the school can now take proactive action.

RTENs: Provides ready-made reports and proof that makes reporting/acting on dishonesty seamless.
